Side Quests

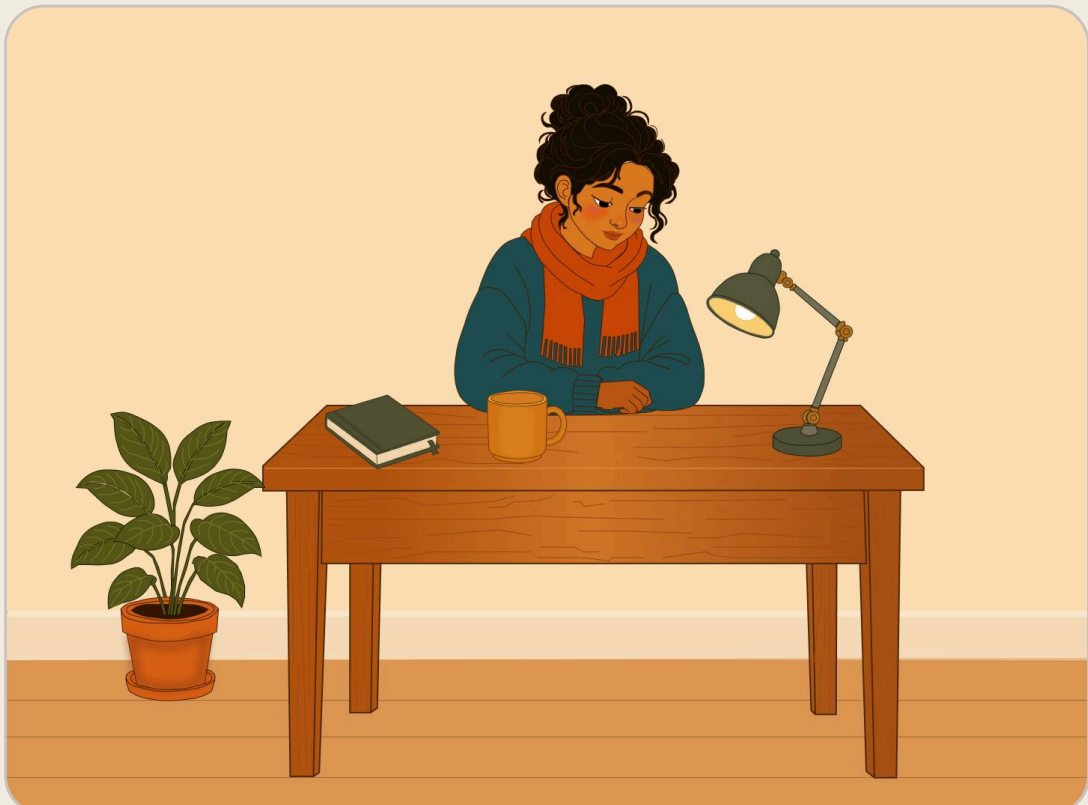

A collection of playful experiments inspired by neuroscience, the culture I grew up around, and my love for turning small ideas into interactive experiences.

My brain said,
"Wait, this could
be fun."

How We Think

My background in neuroscience shapes how I see people, behavior, and interaction. These experiments show how that perspective comes alive in HCI—and why I love it.

What Changed?

Experience change blindness by spotting what changes between two scenes—and see how attention shapes what we notice, miss, and act on.

Sound Like Something

Sound Like Something

Language isn't just words. It's tone, pauses, and stress — the parts text throws away.

Tap to hear a voice. Then guess what it meant.

Start listening

Experience how tone, pauses, and stress change meaning—and why voice interfaces need more than words.

Play Now →

Teach Me Without Telling Me

Teach Me Without Telling Me

No instructions. No tutorial. Just try things—and watch what Momo does.

Meet Momo

Experience how feedback and subtle cues can teach without instructions—by figuring out what Momo wants.

Play Now →

You Already Chose

You Already Chose

Pick a plan. It's a completely free choice. ...or is it?

Choose a plan

Experience how tone, pauses, and stress change meaning—and why voice interfaces need more than words.

Where I'm From

The crafts and patterns I grew up around in Andhra Pradesh still shape how I see form, rhythm, and play. These projects are my way of bringing a little of home into interaction.

Kondapalli Workshop

Kondapalli bommalu are a beautiful craft many people have never seen. I made this game so they could discover it by building and painting one.

Play Now →

Muggu

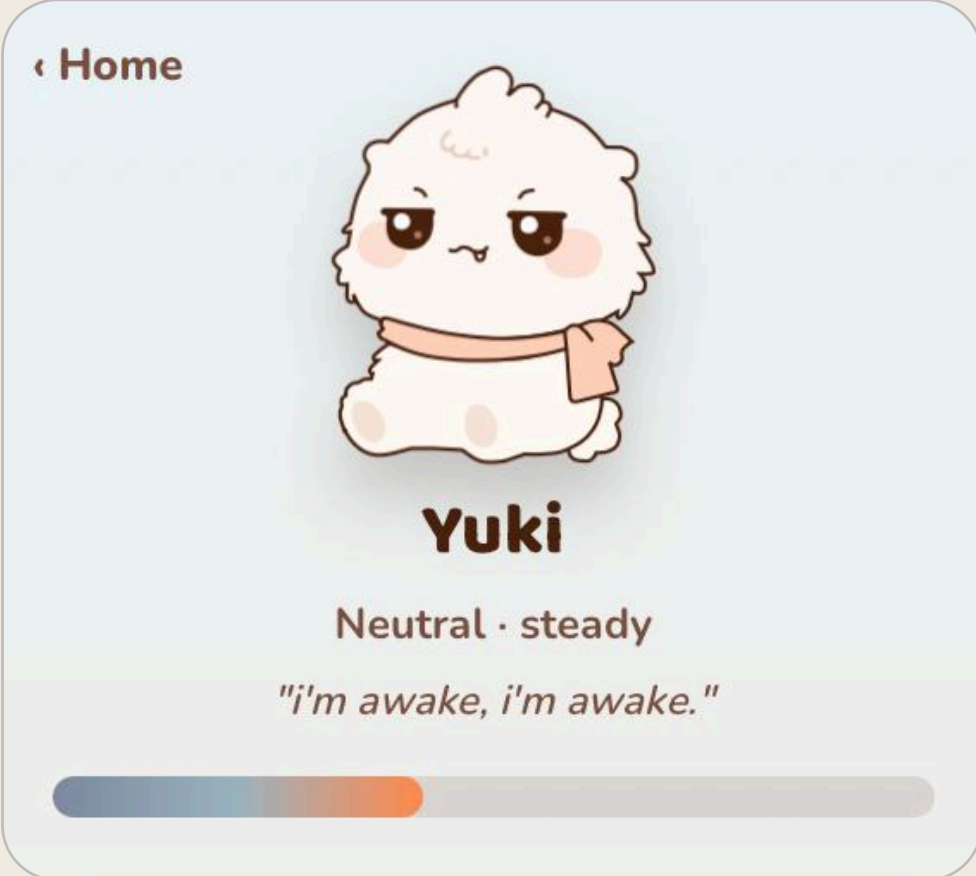

Muggu is an art form built from dots, rhythm, and repetition. I turned it into a game so people could create one and watch the pattern unfold.

Things That Move

The crafts and patterns I grew up around in Andhra Pradesh still shape how I see form, rhythm, and play. These projects are my way of bringing a little of home into interaction.

Yuki - Focus Guardian

A tiny yeti who guards distracting apps, reacts to your choices, and makes staying focused feel a little more human.
